13(1)	<p>The mining operations in the lease area are not carried out as per approved scheme of mining and following deviations are observed during inspection.</p> <p>a) It was proposed in scheme of mining approved vide letter no. MSH/OTF.MECH-14(MAH) dated 01.07.2011 to develop &amp; produce bauxite mineral from block-I of the lease area. There were four pits as on 01.04.2011 in block-I and further planned to merged all these four pits in 2010-11 and further advancement in east &amp; west direction in subsequent years. There was no proposal for development &amp; production in Block-II and MOEF also imposed specific condition to reclaim &amp; rehabilitate first pit after complete exhaust of mineral before start of mining operations in second/subsequent pit. It was observed during the inspection that there are eight separate pits in Block-I and nine separate pits in block-II. Reclamation &amp; rehabilitation by way of leveling &amp; plantation in pit-1 was observed over 5-6ha area and all other pits are in operation for production of bauxite.</p> <p>b) It was proposed in Para 6.1 &amp; plate 9 to reclaim &amp; rehabilitate 12.62ha and 11.11ha of mined out area during 2011-12 and 2012-13 respectively. It was observed during inspection that reclaimed &amp; rehabilitated area is hardly 5-6ha of the total 31.38ha area put in use under seventeen pits.</p> <p>c) It was proposed in Para 5.3 &amp; plate-6A-D to generate 2,00,000t @ 20% of ROM as intercalated waste every year. It was observed during inspection of mine that intercalated waste was not generated &amp; reported during last three years while achieving 390560t, 249909t &amp; 249200t bauxite production in 2010-11, 2011-12 &amp; 2012-13 respectively.</p>
